

Database Solutions, LTD. Launches XMLife Module for Canada Life

Monday April 10, 7:00 am ET

XMLife Module Facilitates Updated Canada Life Insurance Policy Feeds for Brokerages Using Agent Intelligence On-Demand Software

TORONTO--(MARKET WIRE)--Apr 10, 2006 -- Database Solutions, LTD. (Other OTC:[DBSJ.PK](#) - [News](#)), a Customer Relationship Management (CRM) and Technology Company for the Insurance Industry, today announced that it has completed and launched its XMLife module designed for importing updated insurance policy data, provided directly from Canada Life, a leading Toronto-based insurance carrier, into Database Solution's Agent Intelligence On-Demand software system widely used by the insurance brokerage industry.

XMLife module was developed in conjunction with our insurance brokerage customers to be able to accept data feeds from various Insurance carriers and automatically migrate the updated policy information into the Agent Intelligence system. The XMLife module is an add-on feature and will be available for an additional charge to our customers using our Professional Agent Intelligence management tool, and will eliminate insurance brokerages having to manually input permanently stored policy information such as medical and signature requirements, commission verifications, and messaging data into the Agent Intelligence system.

Canada Life is the first major carrier the XMLife module has been developed for and Database Solutions is currently working closely with several other, soon to be announced major carriers, to mirror this program that will save our clients time and money.

Mr. Jason Wong, Chief Executive Officer of Database Solutions, Ltd., stated, "We work closely with our customers that give us valuable feedback and ideas to better our product offerings. This is another example of our commitment to be the number one Customer Relationship Management Company in the industry."

About Database Solutions, LTD.

Database Solutions, LTD. is a technology and marketing company in the on-demand Customer Relationship Management (CRM) industry and the software developer of Agent Intelligence. Database Solution's Agent Intelligence Technology is a proprietary browser-based software and was designed specifically for the insurance industry to provide backend administration of insurance policies, client tracking and client marketing/selling strategies for an entire insurance brokerage or insurance company. The Company's family of products includes a comprehensive suite of CRM applications to help enterprises of all sizes, industries and geographies meet the complex challenge of sharing and managing information on-demand. Unlike other insurance administration systems currently on the market, Agent Intelligence focuses on the needs of the broker by simplifying their business while eliminating the paper administration involved in tracking their clients to increase sales. By automatically tracking all events along the lead development process an agent and/or manager is able to see any weaknesses in an agents selling process. Automated reports critical to both management and agent are automatically available through the use of the Agent Intelligence System. Agent Intelligence is 100% browser based and requires no hardware or software installation. The Agent Intelligence user also immediately benefits from complete upgrades and on-demand customization.
