

Database Solutions, LTD. Announces Plans to Open New Database Web Development Subsidiary

Tuesday August 22, 8:00 am ET

Decision to Form Subsidiary Is Based on Increased Requests for Customized Database Driven Web Sites

TORONTO--(MARKET WIRE)--Aug 22, 2006 -- Database Solutions, LTD. (Other OTC:[DBSJ.PK - News](#)), a Customer Relationship Management (CRM) and Technology Company for the Insurance Industry, today announced that it plans to open a new database web development subsidiary. Since 2002, Database Solution's efforts have been on the successful development and launch of its Agent Intelligence CRM product, however the request for customized database driven sites have increased dramatically.

There is a rising trend for companies to use database driven web systems, CRM or otherwise, to manage their customer base and to run their business. Database Solutions sees the opportunity, based on many requests over the last year, to capitalize on this market and has decided to offer this valuable web hosted service.

The Company has already begun sending out proposals to potential clients looking to enhance or develop their web system to provide a complete automated web based data tracking and backend project management solution. Database Solution's new subsidiary will only focus on larger scale projects that exceed a price of \$25,000, and will not include web stores or standard company websites, except for Agent Intelligence clients.

Mr. Jason Wong, Chief Executive Officer of Database Solutions, LTD., stated, "I think it is a good decision for any company to diversify especially if they have a proprietary technology that is as versatile as ours." Mr. Wong continues by stating, "We have looked at the potential revenues Database Solutions would realize by offering our technology to other industries, and based on that, this decision is a no-brainer."

About Database Solutions, LTD.

Database Solutions, LTD. is a technology and marketing company in the on-demand Customer Relationship Management (CRM) industry and the software developer of Agent Intelligence. Database Solution's Agent Intelligence Technology is a proprietary browser-based software and was designed specifically for the insurance industry to provide backend administration of insurance policies, client tracking and client marketing/selling strategies for an entire insurance brokerage or insurance company. The Company's family of products includes a comprehensive suite of CRM applications to help enterprises of all sizes, industries and geographies meet the complex challenge of sharing and managing information on-demand. Unlike other insurance administration systems currently on the market, Agent Intelligence focuses on the needs of the broker by simplifying their business while eliminating the paper administration involved in tracking their clients to increase sales. By automatically tracking all events along the lead development process an agent and/or manager is able to see any weaknesses in an agents selling process. Automated reports critical to both management and agent are automatically available through the use of the Agent Intelligence System. Agent Intelligence is 100% browser based and requires no hardware or software installation. The Agent Intelligence user also immediately benefits from complete upgrades and on-demand customization.
